EDUCATION

Northern Arizona University. 4.0 GPA

Bachelor of Science in Software Engineering

Flagstaff, AZ

Aug. 2025 – May 2028

CONTRIBUTIONS

Open Source Contributor

August 2026

YouTube.js (LuanRT/YouTube.js)

Remote

- Integrated a large scale core YouTube client to a codebase with over **140,000 weekly downloads**.

Independent Contributor

November 2022

Musi Inc.

Remote

- Discovered and provided a working fix to a major bug in their data extraction service that prevented users from accessing all of their data.
- Contributed to an mobile app that had over **3.1 million ratings**.

PROJECTS

Illusi | *React Native, Expo, TypeScript, SQLite*

October 2022 – Present

- Designed and built a full-stack mobile music app.
- Devised a modular cross-platform data extraction pipeline to create normalized music data from **12 major streaming platforms**.
- Integrated robust error logging using Sentry and an OTA update system to quickly send out hotfixes.

Roze | *TypeScript, Node.js*

March 2024 – Present

- Developed a high-performance TypeScript + Node.js CLI that converts over **6 sources of digital books and web-novels** into audiobooks and audio-visual books with subtitle files and YouTube chapter timestamps.
- Created a batch voice synth engine that can generate up to **9 hours of realistic narration** in **5 minutes**.

Everett | *C++, WebAssembly, TypeScript, React, Tauri*

February 2026 – April 2026

- Built and deployed a Desmos-like calculator with dimensional analysis evaluation over multiple related expressions, built in C++ with WASM support for high-performance math parsing on the web.
- Integrated the Web Assembly code into a TypeScript, React and Tauri frontend with automatic building and deployment using GitHub Actions.
- Optimized the bundle size to be **27% smaller** and **22% faster** than the Desmos scientific calculator.

LEADERSHIP & ACTIVITIES

Club President + Lead Software Developer

January 2022 – May 2025

First Robotics

Sierra Vista, AZ

- Led the software development team using Java and interoperated closely with the hardware team to create robots that are both teleoperated and autonomous.
- Demonstrated the effectiveness of NVIDIA Omniverse's synthetic data generation to develop a real-time AI object detection model rapidly.
- **Fundraised \$20,000**, which led to the club reaching the semifinals of the competition.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C/C++, Java, SQL, HTML, CSS

Frameworks: Node.js, React Native, React, Tauri

Developer Tools: Git, VS Code, Sentry, Vitest, Docker
